GOLDPLAY MINING BEGINS EXPLORATION PROGRAM PLANING ON SCOTTIE WEST PROJECT AND APPOINTS BC EXPLORATION MANAGER

VANCOUVER, BRITISH COLUMBIA – April 26, 2021 - Goldplay Mining Inc. (“Goldplay” or the “Company”)(TSXv: AUC), is pleased to announce that it has commenced exploration planning on its Scottie West project located in the Golden Triangle, British Columbia (BC), Canada and has appointed Andrew Wilkins, PGeo as the Company’s BC Exploration Manager.

Mr. Andrew Wilkins is a professional Geologist with 43 years of experience in the mineral exploration field. He has worked in Canada, Alaska, California, Arizona, Mexico and Argentina and specializes in projects in rugged, mountainous terrain. A substantial amount of his career has been spent in the mountains of northwestern BC, both field mapping and managing exploration and drill programs.

About Scottie West Project, Golden Triangle, BC

Location

The Scottie West Project is located within the “Golden Triangle” of northwestern BC.

- 7 kilometres from the Summit Lake road, the Brucejack powerline and the historic Scottie Gold mine.
- 14 kilometres from the Silbak Premier mill site.
- 40 kilometres from the deep-water port of Stewart, BC.

Geological Potential

Most of the economic mineral deposits in northwestern BC are hosted within oceanic arc volcanic and sedimentary sequences and their associated porphyries.

- Similar rock types are present on the Scottie West property.

- The north-south striking Eskay rift runs through the center of the property. This rift is associated with the historic Eskay Creek deposit, which produced approximately 3.3 million ounces of gold and 160 million ounces of silver at average grades of 45 g/t gold and 2,224 g/t silver respectively. At the time of production, it was considered one of the highest-grade gold mines in the world.
- Scottie Resources to the immediate east has had some reasonable success in recent years on their Scottie Gold Mine Project. They have identified an east-west trending zone of mineralization that runs from the historic Scottie Gold mine through to their recently discovered Domino zone. This trend continues onto the Scottie West project.

There is currently no recorded exploration or mineral occurrences on the Scottie West property. This is most likely due to the heavy glaciation and mountainous terrain, however as Pretium Resources has demonstrated with the Brucejack deposit, a profitable mine can be developed in such terrain.

Scottie West Exploration Program

In November 2020, the Company commissioned an airborne electromagnetic and magnetic geophysical survey on key sections of geological interest on the property. Recently the Company commissioned an orthophoto and digital terrain model of the property using satellite imagery. Upon receiving these results, Mr. Wilkins and team will conduct a structural and geophysical interpretation to help guide the upcoming 2021 exploration program.

For the 2021 field season, the exploration program will consist of detailed prospecting and geological mapping as well as talus fine soil geochemistry studies in non-glaciated areas with outcropping and available soil material. Following these results, targeted channel sampling and/or trenching will be focused upon any promising showings or geochemical anomalies.

A drill program will be planned for the 2022 field season targeting discoveries from the 2021 program.
